I have two XM subscriptions because FM and AM radio do not meet my needs. I do a lot of travelling and pay for satellite radio because FM/AM are not available. I object to NAM Petition 04-160 because it does nothing to improve the quality of the signals reaching the public. The FCC should be encouraging new technology and more diversity of content reaching the public rather than stifling innovative companies. If AM/FM broadcasters want to do more for so called free radio listeners they can!! why should paying subscribers be restrained to benefit free listeners.
